## Debugging tool

Posted by ras - 2008/08/22 15:50

---

We have already achieved good stability, but you can help to improve it. The best way is to run kvats (or qutecom) in gdb, preferably on Linux:

```
- cd /wherever/is/your/kvats2.2
- cd build
- ./build_make.sh --build debug
- gdb debug/qutecom
- (gdb) r
```

When the software crashes, enter

(gdb) where

and post the stacktrace here with a short description, what you did.

Thank you for your testing and sending reports.

As of January 2009 we have reached production stability. Watch out for the kvats final release, coming soon ;)

At BuyMMOAccounts.com, such a problem is permanently eliminated. When wow gold the Website buy wow account, it always make buy wow gold sure ownership is completely and fully transferred without world of warcraft gold further ado and condition. Though many critics would cheap wow gold insist that buying World of Warcraft accounts is ffxiv gil like cheating and is like skipping the basic buy rs gold and helpful experiences where players could learn a runescape gold lot, many players would rather buy such already rs gold developed and secured World of Warcraft accounts. By blog doing so such players would be able to focus more on strategizing and setting techniques to succeed n playing the game. Also, it is more fun if your WoW characters would already possess the powers and skills necessary to make the game work.
